

Dexion Agile Locker Range

Product overview

Dexion Agile Lockers offer a wide range of flexibility to meet the growing demand for locker solutions within today's workplaces.

Dexion recognises the importance of a functional and ergonomic locker which supports the way your business operates and that is why Dexion Agile Lockers have been designed with adaptability in mind and can be configured to meet your specific needs.

Frequently utilised in ABW (Activity Based Workplace) environments, Dexion's Agile Lockers are cleverly designed to work in harmony with the Dexion Dynamic Locking Range.

Our locker designs are manufactured from hard wearing melamine with an exterior finish which can be selected from common ranges such as Laminex. The designs provide superior accessibility for critical lock system components which means the lockers don't need to be dismantled for typical service and maintenance.

Construction is of the highest quality and incorporates features which are rarely presented in other designs. These features include adjustable levelling feet, intermediate shelves notched to locate on shelf pins (so they cannot be easily dislodged), and a chamfer on the back of each mail slot for user friendly mail delivery and potentially door opening. Dexion also offers steel construction options for a full system or for the carcass with melamine doors and exterior. Steel lockers are more durable and reduce the floor space consumed.

Dexion Agile Lockers in conjunction with Dexion Dynamic Locking, offers one of the most sophisticated, functional and competitive locker and locking solutions available in the market. Dexion can provide a tailored turnkey solution which is easily scaled to your business requirements. Dexion Agile Lockers also carry GreenTag certification*.

*Excluding locks, touchscreen and electrical components.

Key features and benefits

- Standard door configuration of 2, 3 and 4 tiers (Standard or stepped door shapes).
 - Standard heights are 1050mm, 1500 and 1950mm high (includes 150mm kickplate).
 - Standard 400mm width and 460mm depth overall.
 - Standard carcass finish is white E-zero 16mm moisture resistant board with white edging.
 - Standard exterior finish (doors, kickplates, tops and end panels) is E-zero 16mm and nominated from a wide range of standard and custom finishes.
 - Lock box and cable management (Gold level locking).
- Full range of accessories include;
- Numbered door labels.
 - Customised door labels.
 - Intermediate shelves (fixed or adjustable).
 - Flat tops, sloped tops and bulkheads.
 - Incorporated seating.
 - Filler panels for corner or alcove units.
 - Standard clothes hanging rails.
 - Hanging rail with anti-theft coat hange.
 - Mail slot (includes chamfer to internal side of slot, painted black).
 - Tops for island configuration with layout bench.
 - Finishing end panels - plain.
 - Finishing end panels - with Touchscreen (Gold level 'Integrated' Locking).
 - Built in console – with Touchscreen (Gold level 'Integrated' Locking).

Configuration overview

The Dexion Agile Lockers are available in three different heights and four different configurations as a standard (see image right). The lockers have a 150mm kick plate at the base that covers adjustable feet that ensure the product can be levelled on uneven flooring. When the optional mail slots are applied to the design they are set at ergonomic heights to ensure mail can be easily received by the user and then delivered. The internal of the lockers includes a 1x internal shelf that provides a clear space for mail deliveries and this can be adjusted to suit requirements.

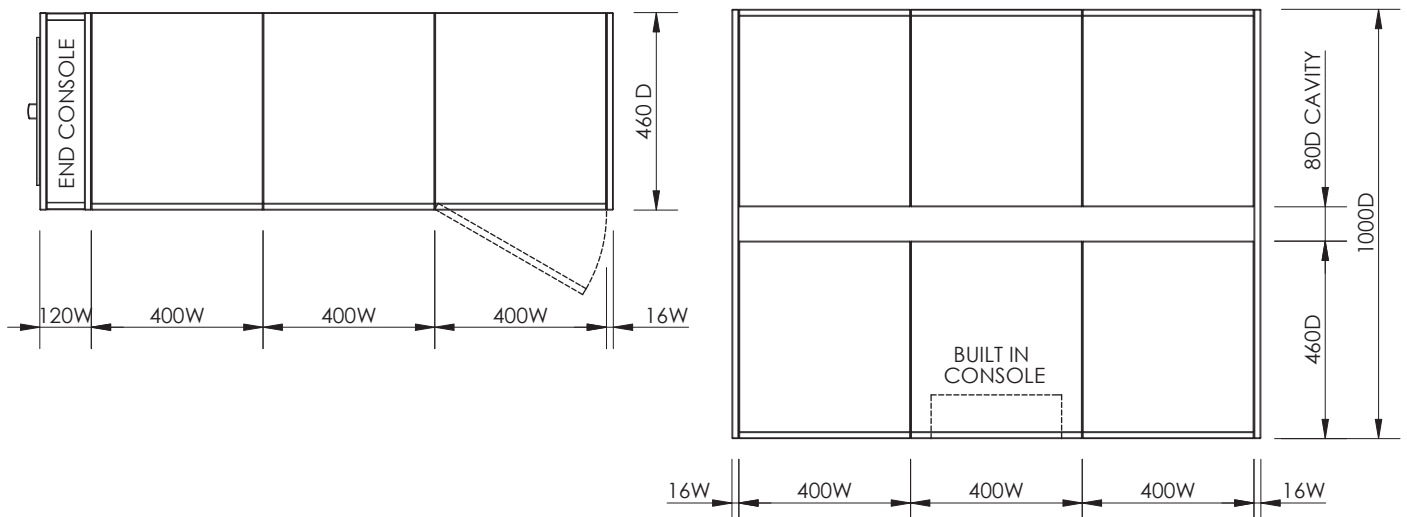

When utilising the Gold level locking, thought has been given to the cable management that comes with these solutions. Each locker has a channel to manage the cable reticulation between the lockers, preventing messy cable on the locker interior or user tampering. The space behind the kick plate allows for cable reticulation and there is the provision that these could be locked to secure the access to the zone. Alternatively the design has the option to configure a rear cavity behind the lockers to manage this cable reticulation and this adds an offset from the backing locker or the wall.

The Dexion Agile Lockers offer a wide range of flexibility and can be customised to meet the varied spaces and interior requirements of modern office spaces, provided an effective solution to personal storage. More information on the specification system is available via Dexion's sales support team.

Kick-plate height is 150mm and add 16mm to heights when using a finishing top.
