

Dexion Multibay 2 Compactus - Dynamic Locking

compactus[®]

Product overview

The Dexion Multibay 2 Compactus secured with Dexion Dynamic Locking, revolutionises fixed track Mechanically Assisted Compactus solutions. The system offers the most comprehensive security and access accountability options in the market with three distinct levels of locking to choose from, each with varying connectivity, security and functionality options. The Dexion Multibay 2 Compactus is secured as standard with our Bronze level latch locks. Silver level introduces keypad and RFID card operated locks supported by battery power. Gold level utilises RFID card or even app operated locking for the user, with centralised server connectivity for administrators. Gold level is available with live connection to your BAC system (Building Access Control) and / or Microsoft Active Directory system, and is commonly employed in ABW (Activity Based Workplace) environments.

Gold level locking with its centralised server for administrators can be applied to a range of other Dexion products to deliver a seamless and dynamic locking system to all the storage mediums in your fitout for ultimate access accountability to stored contents. Other Dexion products include Freetrack 2 Compactus, Mekdrive 2 Compactus and Strata 2 Tambour Door Cabinets.

The Dexion Multibay 2 Compactus is ideal for maximising storage capacity in your available floor space. It is typically used for bulk storage of any regularly accessed items in the office, back of house retail area, library, warehouse or archive. You can easily upgrade your Dexion Ultima CI-80 Static shelving to a Dexion Multibay 2 Compactus.

Key features and benefits

- Carries significantly greater loads due to a rigid track and base system.
- Bases are mechanically-driven to reduce operator strain.
- Fixed floor track systems cater for uneven floors.
- Structural infill floors between the tracks provide a safe and solid working platform.
- Infill platforms are finished with a 'walk-up' ramp to reduce trip-hazards and allow trolley access.
- Available in a wide variety of sizes to allow system tailoring.
- Dynamic locking options with varying levels of connectivity, security and functionality.

Note: Refer to the Dynamic Locking Range (Gold, Silver, Bronze) specification sheets for more detail on the lock functions and suitable applications.

Technical specification

Drive type	Mechanically assisted
Shelving & accessory system	Ultima CI-80
Maximum system width	6600mm
Shelving width (bay width)	750mm 900mm 1050mm 1200mm
Shelving depth	250mm 300mm 400mm 450mm 500mm 600mm
Shelving height	1875mm 2175mm 2400mm
Overall system height	2050mm 2350mm 2575mm
Maximum bay carrying capacity*	Up to 1000kg per linear metre
Maximum movable block load*	20 tonne
Anti-tilt system	Overhead Stabiliser when required
Standard colours	Stone White (shelving) Graphite Ripple (base)
Other colours	Refer to Colour Selector

*Uniformly distributed load. Shelf, beam and bay capacities may vary. Please contact your Dexion sales support team for specific maximum loads based on your configuration.
